MAI, ANH D

ART UNIT

PAPER NUMBER

2814

DATE MAILED: 10/16/2003

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	09/749,590	OHTAKE ET AL.	
	<b>Examiner</b>	<b>Art Unit</b>	
	Anh D. Mai	2814	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspond nce address --**  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED. (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 08 September 2003.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-17, 20 and 21 is/are pending in the application.
- 4a) Of the above claim(s) 11-17 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-10, 20 and 21 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.  
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

**Priority under 35 U.S.C. §§ 119 and 120**

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
a) ☐ All    b) ☐ Some \*    c) ☐ None of:  
1. ☐ Certified copies of the priority documents have been received.  
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).  
\* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).  
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## DETAILED ACTION

### *Status of the Claims*

1. Amendment filed September 08, 2003 has been entered. Claims 20 and 21 have been added. Claims 1-17, 20 and 21 are pending.
2. Claims 11-17 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 11.

### *Claim Rejections - 35 USC § 103*

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. Claims 1, 2, 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over K. Kasai et al. *W/WN<sub>x</sub>/Poly-Si Gate Technology for Future High Speed Deep Submicron CMOS LSIs*, in view of Jeng et al. (U.S. Patent No. 5,877,074) all of record.

With respect to claims 1 and 2, Kasai teaches a semiconductor device substantially as claimed including:

a pair of impurity diffused regions formed in a silicon substrate, spaced from each other, and

a gate electrode formed above the silicon substrate between the pair of impurity diffused regions with a gate insulation film interposed therebetween, the gate electrode being formed of a first polycrystalline silicon film formed on the gate insulation film, a second polycrystalline silicon film formed on the first polycrystalline silicon film and having crystal grain boundaries

which are discontinuous to the first polycrystalline silicon film, and a metal nitride film ( $WN_x$ ) formed on the second polycrystalline silicon film, and a metal film (W) formed on the metal nitride film. (See Fig. 2).

Thus, Kasai is shown to teach all the features of the claim with the exception of the second polycrystalline silicon film having a thickness and thinner than that of the first polycrystalline silicon film. Note that, the claimed thickness does not appear to be critical.

Note that the specification contains no disclosure of either the *critical nature of the claimed dimension of any unexpected results arising therefrom*. Where patentability is aid to based upon particular chosen dimension or upon another variable recited in a claim, the Applicant must show that the chosen dimension are critical. *In re Woodruff*, 919 F.2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990).

However, Jeng teaches a semiconductor device including: a gate electrode formed above the silicon substrate (11) with a gate insulation film (12) interposed therebetween, the gate electrode being formed of a first polycrystalline silicon film (31) formed on the gate insulation film (12), a second polycrystalline silicon film (32) formed on the first polycrystalline silicon film (31), having a thickness of that includes the upper limit of claimed range, 20 nm, and is thinner than that of the first polycrystalline silicon film (31). (See Fig. 5, col. 3, ll. 5-19).

Therefore, it would have been obvious to one having ordinary skill in the art at the time of invention to form the second polycrystalline silicon film (32) of Kasai to the thickness of 20 nm, as taught by Jeng to prevent impurity atoms from out diffusion during the formation of the metal layer (W).

Regarding the second polycrystalline silicon film, the  $\alpha$ -Si of the references are subjected to a high temperature anneal, thus, crystallized, hence polycrystalline silicon. Further, since the  $\alpha$ -Si is formed at a lower temperature than that of the polysilicon (first) layer, thus, the grain size is differed than that of polysilicon, therefore, the crystal grain boundary of the two layer are discontinuous. The subject matter is well known in the art. (See Jeng '074, col. 3, ll. 5-19).

With respect to claims 5 and 6, the first polycrystalline silicon film of Kasai further includes boron.

4. Claims 3, 4 and 7-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kasai et al. and Jeng '074 as applied to claims 1 and 2 above, and further in view of Tsukamoto (U.S. Pub. No. 2001/0000629) (of record).

With respect to claims 3 and 4, Kasai and Jeng teaches a gate electrode formed above the semiconductor substrate including the second polycrystalline silicon film formed on the first polycrystalline silicon film.

Thus, Kasai and Jeng are shown to teach all the features of the claim with the exception of explicitly disclosing an oxide film formed between the first and second polycrystalline silicon films.

However, Tsukamoto teaches a native oxide film (20) is formed between the first (6) and second (7) polycrystalline silicon film so that the grain size of the second polycrystalline silicon film (7) can become large. (See Fig. 6).

Therefore, it would have been obvious to one having ordinary skill in the art at the time of invention to form an oxide film between the first and second polycrystalline silicon films of Kasai as taught by Tsukamoto to suppress fluctuation in the threshold voltage  $V_{th}$ .

Product by process limitation:

The expression “or a chemical oxide film formed by liquid chemical treatment” is taken to be a product by process limitation and is given no patentable weight. A product by process claim directed to the product per se, no matter how actually made, *In re Hirao*, 190 USPQ 15 at 17 (footnote 3). See *In re Fessman*, 180 USPQ 324, 326 (CCPA 1974); *In re Marosi et al.*, 218 USPQ 289, 292 (Fed. Cir. 1983); and particularly *In re Thorpe*, 227 USPQ 964, 966 (Fed. Cir. 1985), all of which make it clear that it is the patentability of the final structure of the product “gleaned” from the process steps, which must be determined in a “product by process” claim, and not the patentability of the process. See also MPEP 2113. Moreover, an old and obvious product produced by a new method is not a patentable product, whether claimed in “product by process” claims or not.

With respect to claims 7, 8, 20 and 21, the first (6) and second (7) polycrystalline silicon film of Tsukamoto are further doped with boron. Further, the native oxide layer (20) formed between the two polycrystalline silicon films (6, 7) functions as impurities diffusion blocker (suppress fluctuations in the threshold voltage  $V_{th}$  caused by mutual diffusion of the impurities) and following an anneal step, the impurities are known to segregate toward the upper surface, therefore, the boron (impurity) concentration in the first polycrystalline silicon film (6) near the interface between the first polycrystalline silicon film (6) and the second polycrystalline silicon

film (7) is inherently higher than boron (impurity) concentration in the second polycrystalline silicon film (7) near an interface between the first polycrystalline silicon film (6) and the second polycrystalline silicon film (7).

With respect to claims 9 and 10, the crystal grain size of the first polycrystalline silicon film (6) of Tsukamoto is smaller than that of the second polycrystalline silicon film (7).

### ***Response to Arguments***

5. Applicant's arguments filed September 08, 2003 have been fully considered but they are not persuasive.

With respect to the rejection of claims 1, 2, 5 and 6, Applicants assert: "In Kasai et al., doping to the first polycrystalline silicon film and amorphous silicon film are conducted after the formation of these films so as to form dual gate CMOS structure".

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., the impurity incorporated in the polycrystalline silicon films) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

The main issue here is whether or not the second polycrystalline silicon film of Kasai, in view of Jeng '074, having the thickness as claimed (2-20nm). According to Jeng, the second polycrystalline silicon film (32) can be deposited to the thickness of 20nm.

Additionally, the invention as disclosed also includes: doping the impurity into the amorphous layer prior to depositing the barrier metal. (See pages 31-32).

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

With respect to the rejection of claims 3, 4 and 7-10, as discussed above, claims 1 and 2 are obvious over the combination of Kasai and Jeng '074. Therefore, claims 3, 4 and 7-10 are obvious over the Kasai and Jeng '074 in view of Tsukamoto.

### ***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 2814

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anh D. Mai whose telephone number is (703) 305-0575. The examiner can normally be reached on 8:30AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wael Fahmy can be reached on (703) 308-4918. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7722 for regular communications and (703) 308-7722 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
